PROFESSIONAL SUMMARY

Performance-driven and self-motivated 4th Year B.Tech student in Artificial Intelligence & Data Science, with a strong interest in Data Science. Seeking an opportunity to apply analytical, programming, and problem-solving skills to real-world data-driven challenges while continuously learning and contributing to organisational growth.

EDUCATION

Qualification	Institution	Year	Score
B.Tech – AI & Data Science	V.S.B. Engineering College, Karur	2023–Present	8.2 CGPA
HSC (XII)	Santhanam Vidyalaya Sr. Sec. School	2021–2023	82.2%
SSLC (X)	Mahatma Gandhi Centenary Vidyalaya	2020–2021	72.6%

TECHNICAL SKILLS

Programming Languages	Python, Java, C, SQL
Data Analysis & BI	Statistics for Data Science, Power BI
CS Fundamentals	Data Structures & Algorithms (Java), Object-Oriented Programming (Java)

SOFT SKILLS

Problem Solving | Analytical Thinking | Adaptability | Decision Making | Team Collaboration

PROJECTS

AI-Powered Data Analysis Platform using Natural Language Querying

- Built a full-stack AI platform enabling users to upload datasets (CSV, Excel, JSON) and query them in plain English using a React frontend and FastAPI backend.
- Implemented an automated ETL pipeline with dynamic schema detection to handle varied data formats and auto-detect delimiters, column types, and null values.
- Integrated Groq LLM (LLaMA 3.3 70B) to convert natural language questions into optimised DuckDB SQL statements with a safety validation layer to prevent harmful queries.
- Delivered real-time data visualisations (bar, line, and pie charts) and AI-generated business insights on query results using Recharts.

SQL-Based Data Warehouse

- Designed an end-to-end data warehouse using a Bronze–Silver–Gold layered medallion architecture.
- Built Gold layer star schema with customer and product dimension tables and a central sales fact table.
- Developed stored procedures for automated data loading, transformation, and cross-layer validation.
- Applied data cleaning, normalisation, and surrogate keys to maintain high data quality and integrity.
- Created a data catalog documenting table structures, column definitions, and business semantics.

SpendLog AI – Agentic Personal Expense Tracker with AI Financial Assistant

- SpendLog AI is an AI-powered personal expense tracking application that helps users efficiently manage their daily expenses, monthly budgets, and financial goals. The system leverages an intelligent AI agent powered by Google Gemini to analyze spending patterns, provide personalized financial insights, recommend budgeting strategies, and answer finance-related queries through an interactive chatbot.
- The application supports profession-based personalization (such as Student, Employee, Business Person, Doctor, and Parent), dynamically calculates daily spending limits based on the user's monthly budget, tracks expenses across multiple categories, generates financial analytics, and provides smart recommendations to encourage better financial habits. If the Gemini API is unavailable, the system seamlessly switches to a rule-based AI engine, ensuring uninterrupted functionality.
- Developed using **Python (Flask)**, **SQLite**, **HTML**, **CSS**, **Vanilla JavaScript**, and the **Google Gemini API**, SpendLog AI combines traditional expense management with agentic AI capabilities to deliver a personalized and intelligent financial management experience.
